 PILATES • STRETCH • HIT

Class Descriptions

Box Fit
 A cardio workout based on the training used for boxing, focusing on toning and fitness. It includes skipping, boxing drills and bodyweight exercises that incorporate footwork and abdominal movements.

Yoga Flow
 Coordinating body movements with breath to flow from one pose to the next. To focus on strength, openness, stillness, awareness and breath. Some yoga experience is advisable.

Shred It
 A cardio based, high intensity combination workout, using a level of different formats including weights and body weight. The focus is maximal workout, minimal rest. Great cardio workout.

Pilates
 The stretch to focus on elongation of muscles and limbs, moving the body through different forms of stretch to reduce muscles tension, stiffness and stress. Encouraging the body to become more mobile and flexible.

Stretch
 Stretching helps to elongate the body and increase blood flow to our muscles which increases levels of oxygen. This makes us feel a lot more energetic and balanced, releasing those endorphins that help to reduce pain and enhance our mood. Increasing mobility will help body change shape, enhance your flexibility, and help improve posture. And...because of these facts, Stretch also helps prevent injuries happening when participating in sports/fitness classes.

HIT
 A form of interval training, and cardio fitness performed by alternating short periods of intense anaerobic exercise with less intense recovery periods, involving short bursts or high and low intensities.

Strength & Conditioning
 Strength and conditioning classes are designed to work on the parts that you need most help with. Legs, Bums and Tums, we've got you covered from head to toe.
